Applicant is advised that should claim 23 be found allowable, then claim 24 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 17, 18, 22-25, 28 and 32-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Harte et al. (U.S. Patent No. 4,789,475). The reference discloses removing impurities (i.e. heavy metals) from water by passing this water through a bed of activated charcoal having a carboxylic acid containing compound (i.e. EDTA or DMS) adsorbed thereon (see col. 3, lines 62, 63 and 65), in the recited amount (see col. 5, lines 23-25), and prepared in the recited manner (see col. 4, lines 63-68; and col. 5, lines 8-11); and therefore, this reference material will inherently exhibit the recited pH characteristic.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Harte et al. in view of Brioni et al. (U.S. Patent No. 5,437,845). Harte et al. discloses the claimed invention

Art Unit: 1724

with the exception of the recited source of the activated carbon. Brioni et al. teaches (see col. 1, lines 46-48) that it is known to produce activated charcoal from the materials recited in claim 19. It would have been obvious to one of ordinary skill in the art at the time the invention was made to produce the activated charcoal of Harte et al. (see col. 3, line 3; col. 4, line 54; and col. 5, line 25) from the recited materials, since Brioni et al. teaches that activated charcoal is typically produced in this manner.

Claims 20, 21, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harte et al. in view of Lundquist (U.S. Patent No. 6,436,294). Harte et al. discloses the claimed invention with the exception of the recited carboxylic acid. Lundquist teaches (see col. 3, lines 21 and 23-27) the equivalence between EDTA, citric acid and lactic acid as a chelating agent for heavy metals. It would have been obvious to one of ordinary skill in the art at the time the invention was made to substitute the citric acid or lactic acid of Lundquist for the EDTA of Harte et al., since this secondary reference chelating agent is capable of sequestering heavy metal ions from water in substantially the same manner as the chelating agent of the primary reference, to produce substantially the same results.

Applicant's arguments filed June 6, 2003 have been noted and carefully considered, but no longer appear to be relevant in view of the new grounds of rejection.
